

## μStat 400 Bipotentiostat/Galvanostat

Ref. STAT400

**μStat 400** is the portable BiPotentiostat/Galvanostat from **DropSens** that can be applied for **Voltammetric**, **Amperometric** or **Potentiometric** measurements, including **24 electroanalytical techniques**, and can be used with one- or two- working electrodes configuration.

This portable bipotentiostat/galvanostat is **Li-ion Battery powered** (USB charger adapter compatible). It can be easily connected to a PC via USB, RS232 and **Bluetooth®**.

**μStat 400** has eight current ranges: 1 nA to 10 mA, and Auto (the instrument automatically selects the optimal current range), with a **maximum measurable current of 40 mA**.

The supplied **DropView 8400 software** for Windows is used to control the instrument and to plot the measurements and perform the analysis of results. **DropView 8400 software** provides powerful functions such as:

- manual control of the experiment, for tailoring your electrochemical measurements
- plot overlay, peak integration, smoothing, subtraction, derivative curve, baseline fitting, etc
- script editor for programming specific work routines
- peripheral configuration (digital inputs/outputs) for synchronised operation with other devices
- 3D plotting of curves
